

Neo4j Introduction

The Getting Started¹ guide is highly recommended!

1 Installing Neo4j

Download and install the “Community Edition” for your platform². After clicking the download, each has a step-by-step walkthrough of the process to unzip/tar, and run via the console (note: Java 9 is not supported, so use JDK8 instead). Once the server is running, open your browser to `http://localhost:7474`. The default login is `neo4j/neo4j` – then change this to something of your choosing.

2 Play

You will follow the Neo4j browser to introduce ...

- Graph concepts: click the “Start Learning” button, or `:play concepts` in the prompt
- Graph creation/querying: click the “Write Code” and then “Create a graph”, or `:play movie-graph` in the prompt
- Convert from RDBMS: click the “Write Code” and then “Convert from RDBMS”, or `:play northwind-graph` in the prompt
