

DS2000

2/7 - Tue.

### Admin

- Hw3 late deadline today 9pm
- Quiz 4 out today 4:30 - 9:50am Fri
- Hw4 out Fri
- mini viz out now, due March 3<sup>rd</sup>

### Agenda

1. File structure  $\rightsquigarrow$  lists
2. Loops/lists
3. Python

### Review

$lst = [0, 1, 2]$

What prints?

```
for item in lst:  
    print(item)
```

a  
b  
c  
(value)

```
for i in range(len(lst)):  
    print(i)  
    print(lst[i])
```

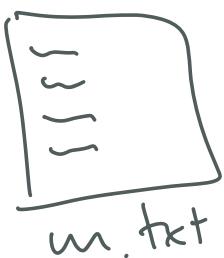

0 a  
1 b  
2 c  
(position)

i is position,  
not a value

$\text{len(lst)}$   
↳ 3

## 1. File Structure

so far...

one value  
per line

initial goal

- turn one line into one list
- Start with readline

`data = infile.readline()`

• turn `" ~ ~ ~ ~ "` a string into a list of strings

`lst = data.split()`

`[~, ~, ~, ~, ~]`

`0 1 2 3 4`

Variation: `~, ~, ~, ~, ~`

`data = infile.readline()`

`lst = data.split(",")`

## Data Theme: Running Data

Today: Lancy's Garmin from January

<u>date</u>	<u>mileage</u>	1	3.5	2	3.6	3	12	...

- read the examples for your topic
- ready to answer questions about it
- jot down any questions

bit.ly/ds2000  
lists

Jan / Feb / Mar - slicing

Apr / May / Jun - plotting

Jul / Aug / Sep - list comprehension

Oct (Nov) Dec - range
